Description of Property and Justification: *(Please attach map and photo)*

The Schaeffer-Zimmerman House is an exceptional local example of Queen Anne style architecture in Frederick County. Located in the Buckeystown vicinity, the residence was built circa 1880.

The Schaeffer-Zimmerman House was documented on a detailed Maryland Inventory of Historic Properties (MIHP) form in 1993 and remains intact to the description that was completed then. The property also has four extant outbuildings: a summer kitchen that is now attached to the main house; a meathouse; hog barn; and stable. All were also documented on the 1993 form, but could not be accessed as part of the present survey.

The landscape of the property was not described in the 1993 form, with the exception of the English walnut tree (*Juglans regia*) that is located in front of the residence. The tree is listed as a 2005 Big Tree Champion by the Maryland Department of Natural Resources. The residence and outbuildings are set back substantially from Ballenger Creek Pike. This skillful placement of the buildings on the parcel preserves the original setting. A driveway leads to the house and is flanked by relatively young deciduous trees. Mature evergreens are interspersed throughout the lawn, which consists of flat, grassy panels. Evergreen foundation plantings are neatly pruned around the base of the house. The parcel of land is three acres in size.

The property is exceptionally well maintained. Both the buildings and landscape are in excellent condition.

History

The history of the Schaeffer-Zimmerman House is well documented on the Maryland Inventory of Historic Properties form. Located in the Buckeystown vicinity, the residence was likely built by local contractor and builder William C. Schaeffer circa 1880. After his death in 1887, his brother Newton Schaeffer assumed control of his business and constructed many houses with similar design components within the boundaries of the Buckeystown Historic District (F-1-29). One area for additional investigation listed in the MIHP form was the possibility that the house had been used as a store at some point in its history. The source of the information was local tradition. Additional research did not yield a definitive answer to the statement.

Significance

The Schaeffer-Zimmerman House is eligible for listing in the National Register of Historic Places as an example of Queen Anne style architecture in a rural area of Frederick County.

The Schaeffer-Zimmerman House is not eligible under Criterion A. It is not the site of any significant historic events in Frederick County.

The property is not eligible under Criterion B. Although the house was likely built by William A. Schaeffer, a local builder, his brother, Newton, was likely the more prominent citizen and builder. Newton led the brothers' company after William's death and was responsible for building many Victorian-era homes within the Buckeystown Historic District (F-129). Furthermore, William only resided at this home for approximately six years before his death. Therefore, the property is not associated with a significant person and is not eligible under Criterion B.

The Schaeffer-Zimmerman House is eligible for listing in the National Register of Historic Places. It is eligible under Criterion C as an example of Queen Anne architecture in rural Frederick County. Although the windows have been replaced, the distinct asymmetrical Queen Anne massing remains intact and is a character-defining feature. The picturesque roofline; use of various cladding materials such as shingles; porch with turned balusters; and scroll-sawn ornamentation are also exemplary features of the Queen Anne style.

The property was not evaluated for eligibility under Criterion D as part of the current study.

The Schaeffer-Zimmerman House has undergone some alterations since its original construction. Most notably, the original windows have been replaced and the summer kitchen has been attached to the main residence. Otherwise, the property retains high degrees of integrity of location, design, setting, materials, association, workmanship, and feeling.

The National Register boundaries for the Schaeffer-Zimmerman House coincide with the current legal boundaries of the property. The open setting and landscape features relate directly to the integrity and significance of the property.

Private

Ca. 1880

The Schaeffer-Zimmerman House is a two-story frame house with a gable projection and a corner turret with german siding and shingled gables built about 1880. The original two-room main section has a two-story rear wing and a recently completed modern addition which linked a formerly free-standing frame summer kitchen to the main house. Other outbuildings include a meathouse and a former hog barn and a stable. The house is significant for the picturesque combination of Queen Anne and Stick style features, which include the two prominent corner elements of the main facade, the shingled gables and turret upper section, the scroll-sawn gable ornament and the rather narrow vertical massing of the main section. The house was probably built by William C. Schaeffer (died 1887), a contractor and builder of the Buckeystown area whose brother Newton R. Schaeffer took over the business at William's death and was largely responsible for many of the houses in the Buckeystown Historic District (F-1-29), most of which echo the features of the Schaeffer-Zimmerman House on a larger scale. The house was owned by the Zimmerman family from 1902 to 1981 and, according to local tradition, a store was operated in the house in the early 20th century.

CONTRIBUTING RESOURCE COUNT: 5

The Schaeffer-Zimmerman House is a two-story frame vernacular dwelling with elements of the Queen Anne and Stick style in its exterior finishes, built about 1880 on the east side of Ballenger Creek Pike (Md. 180) about 1/4 mile south of the South Renn Road intersection near Buckeystown, Frederick County, Maryland. The house has been recently altered with a large two-story frame addition on the northeast corner which linked an originally free-standing summer kitchen to the house. The other contributing outbuildings are a frame meathouse, a hog barn, and a stable, all dating from about the same period as the house. Dates for the buildings were estimated from architectural details, land records, and local historical maps.

The house has a two-room main section with a two-story rear wing extending from the northeast corner. The modern addition adjoins this wing on the northeast and bridges the gap between the wing and the summer kitchen. The principal elevation faces west and has two bays dominated with a projecting gable and a corner turret. The exterior of the house is covered with german siding and the gable faces on the west, north, and south and the polygonal upper section of the turret are covered with patterned wood shingles. The roof is standing seam metal, except the roof on the turret, which was originally slate, but was recently replaced with composition roofing material. The corner angles on the exterior are defined by vertical posts which are given further emphasis by the current paint scheme, a gray ground with white on the trim features. The gable on the west elevation has an arched 1/1 attic window and the projecting eaves have a scroll-sawn ornament at the peak. Simple boxed ogee consoles are on each of the gables. The west elevation has a one-story porch with turned columns. The first story of the west elevation has a center entrance flanked by polygonal bays. The windows are 1/1 with louvred shutters. The door is a modern replacement. The south elevation of the main section has no openings and the north elevation has an off-center single bay. The south side of the rear wing has an integral two-story porch with a plain horizontal railing on the upper level and square posts. The first story has a modern three-part window flanking the glazed panel rear door. An interior end chimney rises at the east end of the wing. The eaves of the porch have a small serpentine bargeboard.

The interior of the house has been much altered, but retains its original molded door and window trim with corner blocks. The plaster ceilings are new and the walls are covered with wallboard and wallpaper. The main section's two main rooms are linked by a wide arch and the south room is the stair hall, with a paneled staircase of turned balusters terminated by a square paneled newel topped by a small urn finial. According to Mrs. Tolbert, the current owner, a previous owner from the Zimmerman family operated a store in the front part of the house, although the dates of this use are not clear. This could account for the small size and simple plan of the house, which could have been a pre-1880 building that was enlarged and remodeled for residential use. However, historical maps of 1858 and 1873 indicate that a residence was on or near the site, so the commercial use could just as likely have occurred in the early 20th century with the house in its current exterior appearance. The rear wing has been extensively remodeled into a large kitchen.

Prepare both a summary paragraph of significance and a general statement of history and support.

The Schaeffer-Zimmerman House is significant for the architecture of the house, displaying elements of both the Queen Anne style and the Stick style in its exterior massing and surface treatments. The unmatched main elevation features of a projecting gable and a polygonal corner turret are often found in Queen Anne houses, built principally between 1880 and 1915. Other Queen Anne characteristics are the patterned shingle surfaces, gable ornaments, and prominent porches. These features are also often found in Stick style buildings. The principal Stick style elements are the corner vertical framing members and the highly vertical massing of the house. The house was most likely built by William C. Schaeffer about 1880 on the Schaeffer family property which had been in their possession since the early 19th century. The 1858 and 1873 maps show that a structure was on or near the site of the present house, possibly an earlier residence. Land records of 1880 transactions refer to two adjoining parcels, the boundary passing through a house existing on the site. It is not clear whether this was an earlier building or the extant house. Newton R. Schaeffer (born 1853) entered the carpentry and building business of his brother William C. Schaeffer in Buckeystown in 1881 and took over the business at William's death in 1887. The two Schaeffers, particularly Newton, were responsible for many of the highly picturesque houses in the Buckeystown National Register District (F-1-29). It is probable that William built the extant house just prior to Newton's joining the business and, after William died, Newton carried on building in much the same style as William had done, using many of the features found on the Schaeffer-Zimmerman House in his Buckeystown houses. In 1902, Newton Schaeffer sold the property to Caroline H. Zimmerman. It was under the Zimmerman ownership, which lasted until 1981, that the possible use of the house as a store may have occurred. The source of this information is local tradition and should be further explored to clarify both the architectural and historical significance of the property.

7.1 Description (Continued)

during which the formerly closed-off kitchen fireplace was revealed although not restored. One of the most intriguing features in the house is a decorative wall shelf on the second floor of the rear wing, a molded narrow shelf with a graduated shield-shaped plaque centered by a corner block. The shelf may cover a stove pipe opening in the wall which is tongue-and-groove panels concealing a closet in which the stove pipe opening is visible.

Summer kitchen: The originally free-standing summer kitchen is a one-story frame building connected to the modern link at the northwest corner where a doorway has been cut through. The exterior is covered with german siding and an interior brick chimney is located on the north gable end. The roof is covered with standing seam metal. The west elevation has a single glazed panel door flanked by a 6/6 window. Another 6/6 window is located in the south elevation. The summer kitchen is currently used as an office and a narrow stair leads to the loft or attic above the single room.

Meathouse: The small frame meathouse is located south of the summer kitchen. It has a square plan with german siding and a corrugated metal roof. A 6/6 window is located on the east elevation and a vertical tongue-and-groove door is on the north elevation.

Hog barn: The frame hog barn is a rectangular structure located just east of a non-contributing shed. It has vertical siding and a corrugated metal roof. A low door on the south elevation and a vertical board door on the north elevation to a feed aisle reveals the original use of the building. The west gable end has an upper level door to the feed storage area. The lower walls of the building are battened, while the feed storage space has open joints between the siding boards.

Stable: The fourth outbuilding was identified by Mrs. Tolbert as a stable, but its original use is unclear. It is a one-story frame rectangular structure located east of and at an angle to the hog barn. It has board and batten siding and a corrugated metal roof. The southeast elevation and west gable end have 3/3 windows and a vertical board door is located at the southwest corner. The building has some characteristics of a chicken house, but none of the typical features such as a band of south-facing windows.

State champion black walnut tree: Although not included in the contributing resource count, a large black walnut tree located on the property east of the buildings has been identified as a potential State champion of its type for the year 2000.
